2.1P: In Person Check-in 1 – Answer Sheet

1. Briefly describe your prior experience with programming.
   - I began learning programming in 2020. While I was learning MySQL, I was also taught PHP during my first semester. It was super difficult for me to learn but eventually, I overcame the struggle. Later on, I was introduced to other languages such as HTML, CSS, JavaScript, C#, and Java. Although I had to mostly learn by myself, I was still able to apply most of the fundamentals to my assignments in my later years of education.

2. Based on what you have seen so far, what do you think will be most challenging about this unit?
   - I think the most challenging thing about this unit will be the introduction of new technologies or techniques that I have never tried before, as shown during the Week 2 lab session where the teacher was seen using Visual Basic programming language and he was able to integrate it with a C# program. Despite that, I will do my best to adapt in order to stay on track with the class contents.

3. What can you do to prepare yourself for that challenge (resources you can use, approach to studying etc.)?
   - For me to prepare myself for my own challenge, I will need to read lectures before class, learn the new technologies that were demonstrated in the class, and practice it during my own time.

4. Is there anything you think the teaching staff should know to best help you this semester?
   - No, I don't think so. I will seek help from the teaching staff later, should I find myself struggling with the class content.
